As an aspiring developer and gaming enthusiast, I am excited to apply for IGN's Code Foo program. My passion for technology has led me to pursue a career in software development, and I also believe that Code Foo would provide me with the opportunity to gain valuable experience in this field while contributing to IGN's mission of providing high quality gaming content to its audience.

In the past three years, I have gained valuable experience working as a Software Engineer. My journey started during my bachelor's degree when I worked on freelance projects for small businesses. I then joined a startup called SortHR, where I worked on front-end and backend development using React and Node (GraphQL). After a year, I moved on to Saltside Technologies, where I continued to grow as a developer.

During my time at Saltside, I primarily worked on Server-side React applications and gained expertise in the technical side of SEO. I also built and maintained several microservices in Node and Golang to process jobs periodically and update the sitemaps. Additionally, I actively participated in discussions on system design and architecture. Also, earned recognition as the "Star of the quarter" for my outstanding performance.

As I continue to grow in my career, I am excited to expand my knowledge in cloud computing and software architecture, which I am enthusiastic about. In my free time, I enjoy exploring new places, watching movies, and learning new technologies. I believe that the Code Foo program would provide me with an excellent opportunity to apply my skills and knowledge to solve new challenges.

Thank you for your consideration and time. I'm looking forward to working with the organization.

Thanks,
Meet
